Regn. No. S-E/150/Distt.South-East/16.12.2013

INSTITUTION OF WATER & ENVIRONMENT (INDIA)

committed to safe water & sustainable environment....

WORLD ENVIRONMENT DAY 2025:

'Putting an End to Plastic Pollution'

As per Business Standard, approximately one-fifth of the world's plastic garbage is produced in India. Every year, the nation produces between 9.3 and 9.5 million tonnes of plastic waste. This includes the daily generation of about 0.12 kg of garbage per person. Hence, Plastic pollution is harmful in many ways:

- **Plastic waste contaminates soil and water, blocks drains, and damages wildlife.**
- **Toxic pollutants are released when over 5.8 million tonnes of plastic garbage are burned each year.**
- **Waste management is a big problem in urban regions, particularly in metro cities like Delhi, Mumbai, and Bengaluru.**
- **India's extensive coastline is impacted because marine life frequently eats plastic, as they mistake it for food, upsetting the marine ecosystem.**
- **India has to address this by enforcing a stronger plastic ban, enhancing recycling programs, and educating the public in waste management and community clean up initiatives.**

Everyday should be Environment day. BE COMMITTED TO SAVE ENVIRONMENT
Let's take care of it.
TAKE ACTION NOW

RETHINK REDUCE REUSE RECYCLE
